

Specimen Cutter

Model No. 2130

This cutter allows easy sampling of paper and film specimens for tensile and folding endurance. The blade is made of a material strictly selected and processed with meticulous tempering and refined. All these ensure safe use for a long time with sharp cutting performance. A stopper precisely parallel to the counter-blade makes accurate specimens. A cum system interlocks a stopper precisely mounted on the counter-blade with a cutting blade. A specimen-holder that automatically moves downward and upward perfectly secures the specimen. So, it is not necessary to hold the specimen with the left hand, ensuring safe and easy operation.

Specifications

Cutting Length:	320mm
Cutting Width:	15mm
Base:	330 x 370mm
Outer Dimensions:	420 x 570 x 100mm
Instrument Weight:	10kg
